SUBJECT: AEROSPACE MATERIAL SPECIFICATION

Dear Dennis:

The Non-Metallic Gasketing Division reviewed the specification you forwarded to us July 20, 1989.

After subcommittee review, we forwarded AMS 3839C, 3840C, 3842C, 3843B and 3858C to the Textile Division of FSA care of Bill McAllister.

The AMS 3232L with some specification modication could be revised to allow replacement. These modifications are primary related to asbestos or are replaced by more common tests.

Revision needed:

3.1	Drop references to asbestos fiber and felted together.
3.1.1	Drop reference to any color.
3.2.2	Fuel A is still in use but more reference is made to Fuel B.
3.2.3	Oil #1 is still in use but more reference is made to Oil #3.
4.5.1	Chloride Content - We propose that our recommended practices for measuring chloride is used. This does not mean recording it rather reference to it is enough.

During our meeting, we were referred to a new specification AMS3275 draft 10/1/89 for non asbestos. Is in fact this new specification to replace the AMS 3232L? Please advise.

Very truly yours,

J.M. Harris
