SURFACE BOND (Y-55)

This product contains over 0.05% lead and so needs to be reformulated so that it can be placed in the "Leadless" grouping. It is discontinued except in the Southwest, so I would assume we would have to do the work here.

If you determine that a DPR is required, would you contact Mr. Riley for it so we can get the reformulation started quickly.

We presently manufacture the Y-55 D (Atlanta) form dated 12/30/68.
