

Air Jacks and Turntables are optional equipment. See Pages 11 and 12.

Model 2260 Rack Features

This is a mechanic's Rack—designed and built to help you work more comfortably, safer and more efficiently. You'll get more jobs done faster...you can handle a wide range of vehicles: imports, full size passenger cars, light trucks, RVs—even long wheelbase pick-ups with this Rack. Its box-girder design insures rigidity and non-deflecting support for vehicles weighing up to 6000 lbs. (2721 kg). Check the features you get with a Model 2260. We think you'll agree that it offers more for the money than any other Rack—bar none!

1. Turntables (optional equipment) may be located in "normal" or "forward" position to accommodate a wide range of wheelbase lengths. Turntables are shown in "normal" position.

2. Extra-wide Runways. Approach Ramps automatically move to "safety" position when Rack is raised.

3. Non-slip Ramps and Runways. Runways are 19½" (495 mm) wide.

4. Detachable Foot Rest Platforms—one on each Runway—are standard equipment. Quickly detachable.

5. Built-in Front Wheel Stops.

6. Two traveling Jacking Beams are standard equipment. 12" (305 mm) wide Jacking Beams roll easily and can be used anywhere along full length of Runways. Automatically lock in position when weight is applied. They also serve as handy tool or parts trays.

7. Retractable Leveling Legs. Each Leg is lowered or raised by means of a convenient locking handle. Height adjustment on each Leg permits leveling the Rack on uneven floors.

8. Runways may be leveled on the floor for alignment work on vehicles; your Post can't tilt.
