A When I calculated, it was just slightly over 0.1, about .11 fiber per cubic centimeter on a time-weighted average basis.

Q Okay. So this would be the time-weighted average then?

A If one did that 22 minutes once a day, yes.

Q Of course, that requires you to make some assumptions?

A Yes, sir.

Q Dr. Weir, as an industrial hygienist and toxicologist, do you have an opinion to a reasonable degree of scientific certainty as to whether exposures in that range like we just calculated would be harmful to humans?

A Yes, sir, I have an opinion.

Q And what is your opinion?

A There is no basis in the medical literature, no basis in the medical science theory, and no basis even in administrative regulations to support that those levels will either cause or contribute to any disease process.
