with compressed air.

Q That is the air hose we have been talking about?

A Yes. .11 up to 7.28. Again, collected in shops in Korea.

Q Doctor, before I ask you to resume your seat at the stand, would you explain to the jury what the main point of this summary is?

A The main point is that this is the available literature everywhere.

Maybe not every paper, but as much as I could collect, and I have assembled it all and that when you look at it in concert across them all, they all represent low numbers, and if you appropriately look at the Rohl study and look at it with technology using technology that everyone else used, you have every reason to expect that they fit in line.

It basically announces that this whole thing does not represent a problem.

Q Okay. Now, you wouldn't be surprised if there were additional studies out there, would you?
