Dear Bob:

This is a follow-up on a letter which I wrote on April 7, 1958 addressed to the Product Service and Safety Section of Ethyl Corporation in New York City regarding Ethyl Anti-Knock Compound, Experimental AK-33-X. This letter was forwarded to you by Mr. H. K. Ball.

I wonder if you are in a position to supply me with any specific information as to the toxic ranges for this material relative to animal and human exposure? My previous letter outlines the items in which I have particular interest.

With best personal regards,

Cordially yours,

Lamson Blaney, M.D.
Medical Director
