Dear Mr. Ilkin:

Attached are physical property data sheets on our Therminol heat transfer liquids.

As discussed with you on October 13, the Therminol FR heat transfer fluids will not be supplied for any new heat transfer systems. The decision to restrict use of Therminol FR fluids is prompted by the fact that these products contain polychlorinated biphenyls (PCBs) of various types. PCBs have been found to be of increasing concern as a persistent environmental pollutant. Recent studies indicate that PCBs can be injurious to certain forms of bird, aquatic and animal life.

The non-PCB containing Therminol fluids, 55, 66 and 77 provide excellent thermal stability over their indicated temperature ranges. We would be most happy to work with you toward the application of these fluids.

Our Therminol representative in your area is Mr. George Pague. George can be reached through our Detroit office at the following address. If we can be of any further assistance, please feel free to call George in Detroit or me in St. Louis.

Very truly yours,

D. E. Roush
Product Specialist
