LEGAL DEPT.

Subject: ASBESTOS-CONTAINING THERMAL INSULATION PRODUCT PATENTS

In accordance with your request we extended our original search which we had previously advised did not show any presently enforceable patents issued to GAF regarding the above, to include expired patents. The extended search indicates that we never had any patents relating to the following items:

Calsilite
115 and 214 Insulation Cements
T/NA - 100
Asbestos Paper
Millboard

*Abraham
Reuborn
Company*

*SBB
Duane Dan
Notes.*

as they were described in the attachment to Vanessa Morgan's memo.

As previously advised, U.S. Patent 3,300,927 relates to T/NA 200 - a roofing product, not T/NA 100 - a pipe insulation. A copy of that patent is attached.

As I read Interrogatory #8 from the information supplied to me, it relates to any U.S. or foreign patent of anyone, not just GAF. To do a search in every country for possible patent coverage relating to the above would take years and a considerable amount of money. It is therefore suggested that any response to Interrogatory #8 be prefaced with the words U.S. and GAF patents.
