

DANA**DANA CORPORATION****Victor Divisions****INTRA-COMPANY COMMUNICATION**

SUBJECT Caterpillar - Victocor 300

DATE February 8, 1968

TO J. G. Belter

In reference to your letter dated February 1, 1968, the following comments are offered:

1. Per sample submitted, I agree that the Victopac material was too heavy.

A tighter control at combining has been instituted and Raw Material Manufacturing has been consulted to improve its production operation.

2. Per sample, I believe bond acceptable to our standard.

3. (b) We are following the Factory Standards.

see SAV note 2/1/68

To S. M. Lillis
I discussed this with J.R.
seems to me a means must be established to prevent
the from occurring. LSD mentioned tighter controls at combining
Should a provision be incorporated in the Factory Standard that
would or could identify this unacceptable material?
How should we handle problem at Cat?
Suggest we discuss.
