"Dutch Boy"
CHROMATED RED LEAD
M-25 N-25

Chromated Red Leads M-25 and N-25 are coalesced pigments comprising 75% red lead and respectively 25% monobasic (M-25) and 25% normal lead chromate (N-25). They possess properties differing from a mechanical mixture of the constituents. M-25 and N-25 Chromated Red Leads combine the best properties of red lead and the lead chromates.

Metal paint primers formulated with the Chromated Red Leads have given excellent performance on exposure tests. Like other rust inhibitive paint pigments M-25 and N-25 may be formulated in paints, either admixed with other pigments or as the sole pigment.

Unlike mechanical mixtures of red lead and lead chromate the Chromated Red Leads have excellent color stability on direct outdoor exposure. Their color stability makes Chromated Red Lead paints adaptable for finish as well as primer coats.

CHROMATED RED LEAD M-25

Table of Properties

Composition	Chromated Red Lead M-25 is a coalesced pigment comprising 75% red lead and 25% basic lead chromate.
Color	Yellow Red
Specific Gravity	8.31
Bulking Value (gallons per pound)	0.0145
Weight per solid gallon (lb.)	69.0
Oil Absorption	7.6
True Red Lead (% Pb_3O_4)	75.0
% CrO_3	5.2

CHROMATED RED LEAD N-25

Table of Properties

Composition	Chromated Red Lead N-25 is a coalesced pigment comprising 75% red lead and 25% normal lead chromate.
Color	Yellow Orange
Specific Gravity	7.99
Bulking Value (gallons per pound)	0.0150
Weight per solid gallon (lb.)	66.5
Oil Absorption	11.4
True Red Lead (% Pb_3O_4)	75.0
% CrO_3	5.2
