Robert A/ Kehoe, M.D.
The Kettering Laboratory
College of Medicine - Eden Avenue
Cincinnati, 19, Ohio

Dear Dr. Kehoe:

I am most appreciative of your lengthy, informative and considerate answer to my letter of inquiry. I will, however, take further advantage of your willingness to answer to a specific case.

The specific case is of a patient who claims his vision has become markedly diminished after having worked about one year as a paint sprayer in a children's furniture factory. His vision now is 20/200 in each eye and he claims that it was normal pre-employment. There are no objective or neuro-ophthalmological findings. I have requested but have not yet been given his pre-employment eye examination nor the contents of the paint he used in spraying. When those answers reach me I shall pass them on to you for further evaluation.

Again, ^{MANY}(may) thanks for your kind indulgence and answering my inquiry so patiently and fully.

Yours very truly,

M. D. Bennin
m.d.
