Monsanto

ANNOUNCEMENT

The Chemical Group

I am pleased to announce that in September both the Anniston and Chocolate Bayou plants were recognized for their commitment to excellence with registration to the ISO 9002 quality system standard.

These two plants bring to 18 the number of Monsanto plants worldwide that have achieved ISO registration for at least one of their production processes and support operations.

We all are indebted to those employees who have worked hard and diligently to gain the ISO registration for their respective locations. The ISO registration is an important competitive tool. Not only have customers come to expect registration as part of doing business, but it gives our own people the assurance and pride in knowing that everything is being done properly.
