Subject: BAGHOUSE, DUST COLLECTOR CONDITION REPORT

*APR 21 1977*

There has been a push on to eliminate paperwork and reduce reports. To help achieve this end, the monthly dust collector condition report is eliminated. This is not meant to imply that baghouses need not be inspected, nor is it meant that the condition of those baghouses should deteriorate. Please continue to inspect baghouses as frequently as necessary.

|------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| I.               | Absolutely no visible dust anywhere.<br>No dust picked up on fingers.                                                                                                                              |
| II.              | Slight visible dust - general overall.<br>Dust picked up on fingers.                                                                                                                               |
| III.             | 1 - 3 local accumulations of dust.<br>No ruptured or blown-off bags.<br>Dust visible - general overall<br>Dust picked up on fingers in general areas,<br>but heavy accumulations well localized.   |
| IV.              | More than 3 local accumulations.<br>1 or more bags ruptured or blown-off.<br>Mechanical failure of shaker or structural parts.<br>Generally heavy accumulations of dust on horizontal<br>surfaces. |
| V.               | Visible external emissions from exhaust stack,<br>external plating and seals, doors, hopper discharge<br>(unless fully enclosed).                                                                  |

Rules: Collector to be rated on basis of condition of its worst compartment.

Example: (3) compartments of a (4) compartment collector  
at rating "I" and (1) compartment at "III"  
causes collector to be rated "III".
