R. T. Halstead - Manv. Research

84-S Sheet Packing.

We have wired H. R. Poulsen that we will produce 84-S sheet with what fibre is available. We wired you asking for release of the 5 tons of African Blue Fibre you are holding for us.

As discussed during the time of your last visit, we received three shipments of Australian Blue Fibre one of which was extremely long. In fact there were five bundles 1 1/2" to 2" in length which we were unable to open up during willowing operations. Furthermore, this lot was so lofty that only with close attention could we prevent plugging-up of the fibre cyclones and lines.

Therefore, if we are to use Australian Blue Fibre we would require that it be processed so as to compare with the two sample lots received as to degree of fibre length and loftiness.

Since we will be ordering blue fibre in order to stay in business on 84-S sheet will you please establish specifications and source of supply for Australian Blue Fibre; transmitting this information to us.

U. D. TORRANCE.
