**Subject:** NO! To Genetically engineered Mosquitoes released in Florida and Texas

Dear Nancy,

I oppose the releasing of GE mosquitoes in Florida and Texas, or any other state. Prior to any release the EPA should clearly test these mosquitoes, reared in an antibiotic, for antibiotic resistance bacteria promotion. Please explain what the long term effects will be as these mosquitoes can breed their mutant DNA into the wild mosquito population. From what I understand, the offspring can survive.

**\*\*Prove they are safe before any\*\***  
GE Mosquitos are released

The bite of this GE Mosquito have never been clinically tested on humans.

We have alternatives (Wolbachia, Irradiated insects) that work better and don't come with the risks.

Sincerely,

Ex. 6
