Your memo 6/26/58

General Offices

TOXICITY OF OS-95

Dr. Kelly and I have discussed the reference memo.

In reviewing the Younger report on the toxicity screening, there are two aspects which we would like to check. One, we would not expect the lethal dose by skin absorption to be as low as indicated. Two, the degree of skin irritation is out of line with what we would expect from its components.

We have asked Younger to repeat these two parts of the investigation and will notify you of the results.

Elmer P. Wheeler
