cc HCW

On Thursday, 3 October, vinyl chloride levels were monitored on W. Pace, E. Woods, and P. White for a 15-minute duration. The results were: W. Pace - 728 ppm, E. Woods - 4.8 ppm, and P. White - 7.6 ppm.

This extremely high reading for Mr. Pace was a result of his walking down by the No. 3 Airflex premix pump while the pump was being repacked.

Specific instructions are being written up to insure there is proper warning and no one enters the area when this pump is being serviced. The maintenance man servicing the pump was wearing an air mask.
