Subject: Cross check samples

Roger, I analyzed the cross check samples also using the GC-method. It took some time because I had to optimize the method. The results are:

GC		Me-blue			
dry weight	wet	dry weight	wet		
C8 ppm	C8 ppm				
SMCFEP-13-6 V-disk	1995	1330	1872	1249	
SMCFEP-13-5 V-disk	2215	1460	2176	1434	
12-4 coag effl	678		719		
22-1 coag effl	1015		1030		

Regards, Cor
