To: Recipients of the UCC
Competitive Vinyl Resins Handbook
(Vinyl Resin Dispersion Resin Section)

A review of the Dispersion Resins section of the Vinyl Resins Handbook No. 5 suggests some changes are in order to update the section and thus make it of greater value.

To avoid reissue of the entire section at this time, we request that you include the appended sheet immediately before page 14, "Summary, Vinyl Dispersion Resins." As modifications of individual sheets are made, the information thereon will be updated.

UPDATED INFORMATION ON USE OF DATA (JUNE, 1971)

In using the following sections, these important points should be considered:

1. The QYHV resin designation is obsolete, reference to QYHV should now be read as QYGV.
2. The use of the QYOH series resins should be emphasized over use of the QYNM resins.
3. Where two or more UCC resins are listed as the nearest equivalents to a particular competitive resin, they are listed in order of preference. The varied end uses, different rheological responses to stabilizers, and other features make the listing of several UCC resin equivalents necessary.
