Mr. Philip Drinker
Harvard School of Public Health
55 Van Dyke Street
Boston, Mass.

Dear Mr. Drinker:

I am sending you herewith a rather lengthy article on the study of the industrial and public health hazards related to gasoline containing tetraethyl lead. For a variety of reasons I should like to have this article appear in the Journal of Industrial Hygiene if it suits the purposes of that Journal, and if you can find a place for it. Nothing has been written on this subject for a number of years and since we are the only people who are following it, but more especially since most of the experimental aspects of the subject have reached their final stage, I feel that the time is ripe for a full presentation of the matter.

I wished to make the article briefer but I have not seen any way to shorten the presentation of the data to any greater extent than I have done. Therefore there are a large number of tables, so many in fact that I have a natural skepticism as to their publication without deletion. I trust you will understand that I do not wish in any way to make suggestion with regard to your editorial policy. On the other hand I feel so keenly the necessity for publishing the full set of tables, that I should be very glad to defray a portion of the expense of their publication if it should develop that expense is the only obstacle to your use of them.

The data which will be used in the preparation of the second article is very near completion and although you will not be interested in it "sight unseen", you will no doubt appreciate my wish to have both articles appear in the same Journal. The second article will be shorter and in my opinion will be the more important and the more interesting of the two articles.

Cordially yours,

N2035
