Roger,

Confirming our conversation of this Monday, Dewitt Petterson and I will visit with you in Windsor on the morning of Friday, July 15. We look forward to discussing with you at that time, the application of the "Quantimet" analyzer for talc shape and size characterization.

We are organizing for preliminary assessments on the manufacturer's instrument, no later than the end of June, of some samples which will be of specific interest to Windsor. If you will furnish these samples and your instructions for preparation of the slide, we will carry out the analyses and have the results for discussion on the 15th.

George Lee
