

A STATEMENT

There appeared in a morning paper on April 23rd, 1928, a report by Dr. Myer Coplans, D.S.O., headed, "Effects of Handling Ethyl." From official reports and other information compiled over a period of five years of continuous use of Ethyl Petrol, this Company and the Ethyl Gasoline Corporation are prepared to meet every point raised by the Report. In view, however, of the appointment of the Government Committee to investigate this whole subject, we feel it would be altogether improper to attempt in any way to anticipate the investigations and conclusions of so authoritative a Committee.
