SUBJECT: Waiver Request for Five (5) Safety Valves in
VnCl Service at North Charleston Tank Farm

Three safety valves associated with the refrigeration systems and VnCl storage sphere are to have their discharges connected back into the vapor space in the top of the sphere. This will require valve resizing and purchase in addition to line modifications.

Two safety valves which are associated with the tank car loading rack will be installed with a rupture disk between the equipment and the relief valve. A test connection and appropriate piping will be installed in the space between the rupture disk and safety valve for monitoring purposes.

Schedule:

- | | |
