STATION: KOA 4 TV
TIME: 5:07 P.M.
CITY: Denver

REPORTER REYNELDA MUSE: "A Lafayette women's breast milk has been found to have high levels of PCB. The state health department has recommended that Marie Darling stop nursing her one-year-old child. She, though, has not made up her mind. Her son, Matthew, will be given a complete physical exam. PCB can cause cancer, liver and skin damage. Today health officials are preparing to remove 17 barrels of that chemical from the Lafayette farm where the Darlings live. (Camera pans PCB barrels with Monsanto label). They're renting their home there. Health officials will also be checking nearby homes for contamination of PCB."

MEDICAL DIRECTOR JOHN DONNELLY: "We understand that it's not a big scale public exposure to the material; but it's probably just relatively two people who have used these foods. It might include also people who have taken some of the milk or eaten some of the meat of the cattle that have been exposed to the PCB here."

REPORTER REYNELDA MUSE: "Earlier tests found high levels of PCB in the farm animals and the soil."
