Dr. R. A. Kehoe
Kettering Laboratory
University of Cincinnati
College of Medicine
Cincinnati 19, Ohio

Dear Dr. Kehoe:

We are seeking data on the toxicity of lead tetraphenyl. Although this compound is a white crystalline solid with a low vapor pressure, the application we are considering would involve temperatures as high as 400°C. As a result, we are interested in inhalation as well as ingestion or injection data.

Can you help us?

Sincerely,

H. H. Fawcett
