G. I. MULHOLLAND

WEEKLY REPORT

1. Haskell Laboratory has strongly recommended that a company-wide project be initiated on the chronic toxicity of DMF. Since F&F employees at Old Hickory and Fairfield use DMF, we will be asked to fund part of this project. A formal proposal will be submitted by Haskell in about 2 weeks.
2. The request from G.M. for the heavy metal content of all products sold to them was answered on January 15. Future requests of this magnitude may require up to six months to answer due to the large amount of computer work required.
3. Guidelines on information to be kept in pollution files will be written by Legal by March 15, 1971.
