SUBJECT: CALSILITE - NO ASBESTOS

Confirming our conversation of September 4, 1970, we have placed 9 lineal feet of 12 x 2 1/2" Calsilite of the test formulation and 3 lineal feet of 12 x 2 1/2" regular Calsilite on a 600°F. steam pipe in the Gloucester boiler house. We are watching this material and periodically will inspect it.

We have the following sizes and quantities on hand at Gloucester:

- 12 x 2 1/2" - 24 lineal feet
- 8 x 2 1/2" - 45 lineal feet
- 2" x 6" x 36" - 81 sq. feet
- 1 1/2" x 12" x 36" - 150 sq. feet

We are interested in locating a test installation in the field in one of our plants or a friendly customer's plant for some of this material. We need a test site where the service temperature would be approximately 1000°F, where the pipe would be subject to normal vibrations, in a plant where we would be free to make periodic inspections and where you would not be embarrassed if the insulation fails after a period of time.

Please advise if you feel something can be worked out in this matter.

W. C. Schvingen
