

AS

Pb output during oral administration	19 4
and output of normal subject over-post exposure period	19-3
Mean Pb content of urine and average Pb content of blood during exp.	19-2
Mean daily Pb content in food and feces	21-1
Mg. Pb per 100 g blood	21-2
Mg. Pb per liter urine	21-3
Mg. Pb in urine per 24 hrs.	21-4
Mean daily wt. of food and lead content of food	22 1
Mg. Pb per liter of lead	22-2
Mg. Pb per 100 g of blood	22-3
Mg. Pb in urine per 24 hrs.	22-4
Mg. per 100 g blood	13-4
Mg. Pb in urine per liter	13-3
Mg. Pb in urine per 24 hrs.	13-2
Mean daily lead content of food and feces	13-1
Weekly data	8
Exposure per week	6
Data on blood of normal subject during ingestion of Aluminum	18-1
Clinical data of a normal subject during ingestion of Aluminum	18-2
Urinary excretion of aluminum	18-3
Urine,feces,diet and blood	9
Urine,feces,diet and blood	7
Phosphorous intake and output	B
Calcium intake and output	A
Alimentary Pb output during oral administration of Pb	20-7
Variations in concentrations of Pb in urine and blood during a 24 hour period	20-6
Lead intake and output during oral administration of Pb	20-5

0005646

...)	
and output of normal subject over post exposure period	20-1
on normal Pb subject during exposure period	20-2
ations of lead in Urine and Blood of Normal Subject	
uring oral administration of Pb	19-5
g of fecal,urine,blood and ingested lead from Jan.-	
pt. 1937	3
Entire data plot	5
Urine,feces,diet and blood	10
Mean daily lead content in food and feces	12-4
Mg.Pb per 100 g of blood	12-3
Mg. Pb in urine per 24 hrs.	12-2
Mg. Pb in urine per liter	12-1
Lead intake and output of normal subject	17
and	
Mean lead content of urine and average lead content of blood for	
30 day periods during oral lead administration	1-1
Lead accumulation during oral administration of Pb	1-3
Comparison of mean lead intake with mean Pb output in feces for	
control and post exposure periods	1-2
Lead accumulation during long periods of daily oral administration	2
Concentrations of lead in the urine and blood of normal subjects during	
exposure periods	1-6
Basophilic stippling during exposure periods	1-5
Lead Accumulation during long periods of daily oral administration	4
Mean urinary concentration--mg. per liter	22
Chamber volume and inflow	16
Employees exposed to Ethyl gasoline, garage mechanics and filling station	
attendants---control and test cases	15
Other patients exposed to Pb in some way--questions, history and	
physical examination	11
