ALL EMPLOYMENT LOCATIONS

ASBESTOS SCREENING PROGRAM

The asbestos screening program for active employees has been in operation since October, 1980. The pensioner program was implemented May, 1981. Both programs have been well received and we anticipate they will provide a valuable contribution to our occupational medicine program.

However, our data base thus far is inadequate in terms of the number of employees and pensioners examined and the results of x-ray and pulmonary evaluation.

Each location is requested to complete the attached form for both employees and pensioners and return to this office by September 18, 1981. This form is in addition to the request for information dated August 3, 1981 on the Pensioner Asbestos Screening Program. Both requests must be completed and returned.

This report should include the following categories

- Number of employees and pensioners examined.
- Number of employees and pensioners found to have possible asbestos-related abnormalities.
- Number of employees and pensioners referred to their private physicians.
- Number of employees and pensioners referred to a pulmonary specialist for evaluation.
- Number of employees and pensioners diagnosed as benign asymptomatic.
- Number of employees and pensioners diagnosed as malignant illness.
- Number of employees and pensioners with abnormalities not asbestos-related.
