① Drs. Tyroler & Heiss

Measures of blood glucose, serum uric acid & pulse rate are not available - these are known confounders of Blood Press.

Is BPb/BP relationship same in lean versus obese, etc
Obesity is a strong correlate of BP.

Premature to draw causal associations

A counter example of a very large population based study numbering 7000 failed to find a relationship.

Some strong mitigating components/statements

② Enterline

Very good list of problems.

③ Kuller.

Other factors obesity, alcohol, sodium, potassium + calcium intake, stress

alcohol, cigarette smoking consider also.

④ Weleer

serum creatinine
