Mr. C. J. Turriff
Tab Chemicals, Inc.
4801 S. Austin Avenue
Chicago, Illinois 60638

Dear Mr. Turriff:

On September 30, 1971, Monsanto will be sending a letter out to all of our present Aroclor customers. The purpose of this letter is two-fold. First, it defines the differences between our old PCB-based Aroclors and our current non-PCB-based line of products. Second, this letter states clearly Monsanto's position on the use of these products in food or food-related applications, in potable water systems, in animal feed systems, and in pharmaceuticals. A copy of this letter is attached.

In light of the current situation with respect to PCBs, we believe that it is important to communicate this information to our customers. As our distributor, we expect you to send the same letter, or a similar letter, to each of your customers, keeping a record of the date sent. We would be happy to provide you with additional copies of our letter if you so desire.

If you have any questions on this subject, please give us a call.

Very respectfully,

W. E. Schalk
Director of Sales
Plasticizers

September 30, 1971

Dear Sir:

As you may recall, on August 31, 1970, Monsanto terminated sales of polychlorinated biphenyls (PCBs) as plasticizers and resin modifiers because it appeared that these products might be associated with some problems in the environment. Monsanto is now selling a line of non-PCB plasticizers under the same trade-name - Aroclor® - as was used in the past. This letter is intended to eliminate any confusion which might result from the fact that this trade-name has been used on both PCB and non-PCB products.

Our Aroclor® product line is now made up of polychlorinated terphenyls, monochlorinated biphenyl, and blends of these products. None of these materials has been shown to create any environmental problems. On the other hand, Food and Drug Administration approval has not been obtained for any of these products. Accordingly, the Aroclor® plasticizers should not be used in connection with food or food-related products, with food wrapping or food container materials. Further, Monsanto strongly recommends that these products not be used in any other application such as non-FDA regulated food systems, in potable water systems, in any animal feeding systems, or in pharmaceuticals.

Very respectfully,

W. E. Schalk
Director of Sales
Plasticizers
