*This is part of a \$5,000
FF project.*

PURCHASE BIOMEDICAL GAS CHROMATOGRAPH

Capital Addition \$7,000

DESCRIPTION

Purchase biomedical gas chromatograph with all-glass system and multiple flame ionization and electron capture detectors for the analysis of thermally sensitive and polar materials.

NEED FOR THE PROJECT

Late in 1966 Swedish researchers reported the presence of polychlorinated biphenyls in a variety of biological samples. Since that time the Organic Chemicals Division has received a number of requests for Aroclor samples from active pesticide research groups. We also know that the U. S. Public Health authorities have initiated studies to evaluate the significance of this environmental contamination.

To assess the validity of these findings, the impact they may have on our Aroclor business, and to avoid restrictive legislation, the Functional Fluids Business Group has begun its own study.

The Applied Sciences Section has been requested to develop the necessary analytical methodology for this project. To do this and to do it correctly, we need to purchase a biomedical gas chromatograph. This instrument is designed specifically for this type of analysis and is used by most pesticide researchers, including the Public Health authorities.

Any analytical information we generate will be judged in terms of the techniques and equipment used. By using the tools most familiar to these people, we feel any information we provide will be more effective.

The biomedical-type chromatograph provides an all-glass system with direct injection into a U-shaped glass column which is attached directly to the base of the flame ionization or electron capture detector. This allows high efficiency analyses to be made on pesticides, steroids, organo metallics and polyfunctional organic chemicals which are thermally or catalytically unstable or have polar functional groups that, in the environment of the ordinary gas chromatograph, cause them to decompose or become irreversibly adsorbed.

The R&D Labs do not at present have such instrumentation. Therefore, we recommend purchase of such a chromatograph for initial use on the environmental Aroclor project and to broaden the capability of the Applied Sciences Section in the gas chromatographic analysis of unstable organic systems.

STATUS OF THE PROJECT

No commitments will be made until this project is approved.

RECOMMENDATION

It is recommended that this project be approved.

Purchase Order AT-9430

Vernon Fox

Stores - J.F.Q. Plant

Sometime ago an instrument containing a radioactive source material was lost before reaching the Research Department. At that time we instigated the following procedure for subsequent orders of like material or equipment:

"This order requires SPECIAL handling. Upon receipt of this equipment in the JFQ Storeroom, please inform:

Dr. Scott Tucker
Station 3439

Please deliver this equipment DIRECTLY to:

Dr. Scott Tucker
Lab 213, U Building

DO NOT LEAVE EQUIPMENT AT ANY DELIVERY STATIONS."

Attached is a Xerox copy of the Purchase Order. Since there is not space on the order to type this statement, will you please take action to insure that the procedure is carried out.
