MECHANICAL ENGINEERING

Published by The American Society of Mechanical Engineers

VOLUME 61 NUMBER 1

Contents for January, 1939

MECHANICAL ENGINEERING: MATERIALS, METHODS, MEN . *Gerard Swope* 5
PHYSIOLOGY FOR THE ENGINEER . . . . . *H. W. Haggard* 8
THE MANUFACTURE OF HIGH-SPEED TANKS . . . *J. K. Christmas* 13
A MAGNETIC FLOWMETER . . . . . *W. M. Lansford* 20
SIMPLIFIED PITOT-TUBE TRAVERSE . *T. K. Sherwood and G. T. Skaperdas* 22
COMMEMORATION OF THE CENTENARY OF PHOTOGRAPHY 24
PROMISES AND DEBTS . . . . . *D. S. Tucker* 27
PROFESSIONAL RECOGNITION 29
AT THE A.S.M.E. 1938 ANNUAL MEETING 40
TO A.S.M.E. MEMBERS: THE COUNCIL REPORTS FOR 1938 59
A.S.M.E. FINANCE COMMITTEE REPORT, 1937–1938 66
SUMMARY OF A.S.M.E. FINANCIAL STATEMENT FOR 1937–1938 . . . 69

EDITORIAL 3
BRIEFING THE RECORD 33
LETTERS AND COMMENT 71
A.S.M.E. BOILER CODE 77
REVIEWS OF BOOKS 79
A.S.M.E. NEWS 82

INDEX TO ADVERTISERS 36

OFFICERS OF THE SOCIETY:

A. G. CHRISTIE, *President*

W. D. ENNIS, *Treasurer* C. E. DAVIES, *Secretary*

PUBLICATION STAFF:

GEORGE A. STETSON, *Editor* FREDERICK LASK, *Advertising Mgr.*

COMMITTEE ON PUBLICATIONS:

G. F. BATEMAN, *Chairman*

C. B. PECK F. L. BRADLEY

COLEMAN SELLERS, 3D C. R. SODERBERG

ADVISORY MEMBERS OF THE COMMITTEE ON PUBLICATIONS:

W. L. DUDLEY, SEATTLE, WASH. A. N. GODDARD, DETROIT, MICH. E. J. KATES, NEW YORK, N. Y. L. S. MARKS, CAMBRIDGE, MASS. J. M. TODD, NEW ORLEANS, LA. Junior Member, A. E. BLIRER, EDGEWATER, N. J., AND H. B. FERNALD, JR., NEW YORK, N. Y.

Published monthly by The American Society of Mechanical Engineers. Publication office at 20th and Northampton Streets, Easton, Pa. Editorial and Advertising departments at the headquarters of the Society, 29 West Thirty-Ninth Street, New York, N. Y. Cable address, "Dynamic," New York. Price 60 cents a copy, $5.00 a year; to members and affiliates, 50 cents a copy, $4.00 a year. Postage to Canada, 75 cents additional, to foreign countries, $1.50 additional Changes of address must be received at Society headquarters two weeks before they are to be effective on the mailing list. Please send old as well as new address. . . . By-Laws: The Society shall not be responsible for statements or opinions advanced in papers or . . . printed in its publications (B13, Par. 4). . . . Entered as second-class matter at the Post Office at Easton, Pa., under the Act of March 3, 1879 . . . Acceptance for mailing at special rate of postage provided for in section 1103, Act of October 3, 1917, authorized on January 17, 1921 . . . Copyrighted, 1938, by The American Society of Mechanical Engineers. Member of the Audit Bureau of Circulations

The COMBINATION of

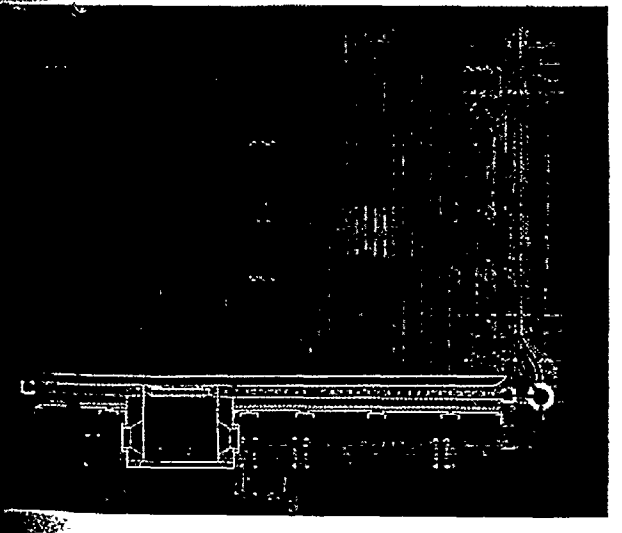

-E Corner Firing and the C-E Continuous

lagging Furnace operates so successfully

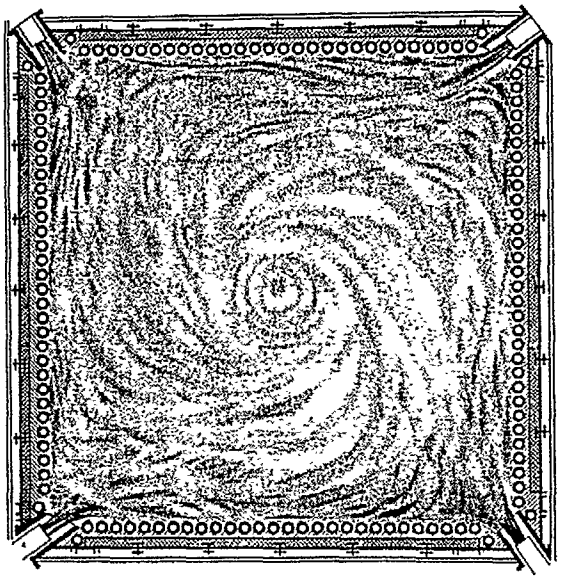

ECAUSE . . .

With a corner-fired furnace, the area of highest heat release and, therefore, highest temperature is immediately cent to the slag bed at the bottom of the furnace. In al furnaces of this type, the nominal heat release in the 10 per cent of the furnace is in excess of 200,000 Btu u ft. The impinging flames from the burners sweep lag bed continuously, subjecting it to heat by convec- as well as by radiation. Thus the slag is maintained uid state over the maximum range of firing.

The C-E design features a patented water-cooled slag pening formed by a special arrangement of the finned which comprise the furnace bottom. The periphery slag opening is protected by a layer of plastic chrome

tion through the lower part of a C-E corner fired furnace ng the general arrangement of the slagging bottom, slag g and drip chamber.

Plan view of furnace showing cyclonic action and turbulence resulting from corner firing. Note that flame completely fills the furnace.

ore which also forms an ideal drip lip for the molten ash. The slag flows freely and continuously, operating difficulties are eliminated, and maintenance is negligible.

3 The water-cooled bottom is suspended from the furnace walls and moves with them, thus avoiding sealing difficulties at the juncture of walls and bottom due to unequal movement of these parts.

These three features, which are available only in furnaces designed and built by Combustion Engineering, account for the notably satisfactory performance and high availability records of every installation of the C-E Continuous Slagging Furnace now in operation.
