OBJECTIVE: Pass on information concerning CBS interview and a recent study released by Federal Lab comparing 1016 and 1242.

CONTACTED: Cliff Tuttle, President
John Hutzler, Chief Engineer
Owen Wood, Marketing Manager
Dennis Ibrahim, Purchasing Agent
Paul Teeple, Plant Superintendent

FEDERAL LAB RESULTS:

Mentioned to the above personnel that Bill Papageorge is forwarding to Cliff Tuttle a copy of the report from the Federal Lab comparing Aroclor 1242 and 1016 with rats. The report, in essence, says that 1016 is less harmful to rats, probably because of the lower concentration of chlorinated homologues in the 1016. This information is encouraging because up to now the Federal Government has been classifying all polychlorinated biphenyls as being the same and this report is suggesting that there is a difference.

CBS REPORT:

The following information was passed on to Aerovox: Four people from CBS--a cameraman, reporter, sound and light engineers, looked at an incinerating unit, taking pictures of tanks and drums, scrubbing tower, etc., then they moved on to the producing unit at Krummrich where many pictures were taken of the bright yellow 1016 drums (with the seven languages on them). The CBS crew did not look for any spills, grease spots, or any sererage disposal areas which seems to be, at least on the surface, a positive sign for Monsanto. This group then retired to an office where they put Bill Papageorge behind a desk where they briefly discussed the entry of PCB's. A few questions were asked concerning biodegradability. Also, questions were asked concerning substitute material where it was pointed out that Monsanto in competition to Monsanto had been looking for substitute s but have yet not found any. And then the final question, was there a need for more controls. The answer to this by Bill Papageorge

was that what is needed now is more scientific data to enable people to make wise decisions.

NOTE TO FILE:

It was also pointed out the reasons, once again, as to why Monsanto could not release another car of Aroclor. This was well understood by Aerovox. They expect to order another car of 1016 to be received the third week in October.
