DOC#: PHN021

DOCUMENT DESCRIPTION: Memo RE Inspection Report of Powhatan Mining Company

James A. Deegan W. R. Miller 7/10/72

Powhatan Mining Company

Report from Department of Labor and Industry dated 7/5/72. Inspection Report No's. 10963, 10964, 10965 (6/28/72) contain 23 work orders covering 27 items of safety deficiencies in both buildings.

Our trip memo 2/3/72 proposed next visit in August for additional sampling predicated upon completion of recommendations 1, 2, 3, 6, 7, 8. #3 (eliminate leaky joints and install covers on openings of conveyor systems) and #6 (prevent asbestos contamination on the outside of shipping bags) not complete at time of Labor & Industry inspection, but reported as "being worked on by Kelco Corp." along with Recs 4 and 5.

In the meantime, permanent asbestos standard 1910.93a has appeared in 37 FR 11318. The time limit for 10 fiber ceiling has disappeared, but I suppose would be on same kind of 15 minute interval.

Mt. Sinai School of Medicine charged $100 for analysis of 12 samples we sent them. Paid by ACC - perhaps we should pick up tab in future or use other outfit in Washington area until Baltimore City Branch Lab is in business.
