Superstructure Work
Specification K-2342

Mr. D. Q. Schultz
c/o Sargent & Lundy
P. O. Box 5217
Drew Station
Lake Charles, Louisiana 70601

Dear Mr. Schultz:

We have the following information to offer in reply to Gurtler, Hebert & Company's letter of May 16, 1967 to which was attached a copy of Corrugated Asbestos Contractors' letter of May 15, 1967.

We do not approve Corrugated Asbestos Contractors' request to substitute self-tapping screws in place of galvanized bolts and clips. Bolts shall be used for all attachments to structural steel, curb and head angles, corner rolls, premolded closures, side laps, etc. No self-tapping screws shall be used for any portion of the work, except 316 stainless screws shall be used for attaching the 316 stainless steel flashing.

We approve Gold Bond Standard 400 Corrugated Asbestone and Gold Bond Asbestone Panels.

We are obtaining information on "Kaukit" caulking and glazing compound from Sonneborne Building Products, Inc.
