As a direct result of our offer to discuss in depth the environmental significance of the published PCB production and sales information, Dr. Edward D. Goldberg, Scripps Institution of Oceanography, Dr. Robert W. Risebrough, Bodega Marine Laboratory, and Dr. George Harvey, Woods Hole Oceanographic Institution have requested a meeting with Monsanto.

The meeting has been scheduled for January 21 and 22. You are invited to participate in the discussion, therefore, please mark your appointment calendars and note that January 22nd is a Saturday.

Dr. Goldberg promised to forward to me a list of questions which will help us in our preparations. As soon as we have determined what information they are seeking, I will arrange a short meeting to review our objectives and approach.
