F. J. Solon

Environmental Health Task Force

1. Survey of Causes of Death of Retirees and Group Life Participants

While some progress was made on this study, the work is not complete. Dr. Smith's resignation will further delay the completion of this work and we will advise you of a new target date as soon as possible.

2. Dr. A. J. Vorwald - Wayne University, Detroit

Dr. Vorwald advised me Wednesday, February 1, that the review of animal tissue and collection of data was nearing completion.

I requested that he submit promptly a formal research proposal in order that we might arrange for payment for this work. The research to date has been done on the basis of verbal commitment.

3. National Insulations Manufacturers Association

I will review the matter of Johns-Manville representation on the Safety and Health Committee with Messrs. Jobe and Burleson, and the N. I. M. A. officers.

4. U. S. Public Health

The summary of research currently being conducted by individuals and groups throughout the country has not been completed. I will attempt to pull this information together, but will not be able to meet the target date of February 6 as committed earlier.
