ASBESTOS SCREENING PROGRAM

The following asbestos questions and answers about the asbestos screening program may be helpful to you.

1. Q Why was this program undertaken?

   A To take advantage of improved techniques to identify lung abnormalities which may have been undetected by the traditional evaluation methods. The program was extended to pensioners since some of them also may have been exposed to asbestos during their Du Pont careers and may have developed pulmonary abnormalities.

2. Q What will happen to those pensioners who elect to participate in the program?

   A They will be scheduled for an x-ray at a Du Pont site or at the office of a private physician. Since most pensioners live within a reasonable distance of Du Pont plant sites, most screening will probably be done at the sites which are adequately equipped to support the program. X-rays will be read by a board-qualified radiologist to see if an asbestos-related disease or condition is indicated.

3. Q Will Du Pont pay for these x-rays by private physicians?

   A Yes. Du Pont will pay for all x-rays authorized as a part of this program.

4. Q Do you anticipate finding many cases of undiscovered lung disease or asbestosis?

   A We believe there may be some previously undiagnosed cases of lung abnormalities, some of which may be asbestos-related. We don't, however, anticipate finding a large number of such cases.

5. Q What medical treatment will be prescribed?

   A Generally, no medical treatment is indicated for asbestosis or asbestos-related abnormalities but all work-related cases will be referred to a pulmonary specialist at Company expense for evaluation and consultation. It is also strongly advised that smokers with an asbestos-related abnormality or asbestosis should stop smoking immediately.
