Metairie, Louisiana 70001

Dear Dr. Gunning:

Received your analysis of the residue data. You did not include any statements related to appearance of the fish. On previous surveys you had reported to the Anniston people the presence of a rather large number of deformed fishes below the point of effluent discharge, as well as many fishes that were hemorrhaging or exhibiting various degrees of nervous system damage.

Can you comment related to the frequency of deformities and other abnormalities when comparing the 1974 fish survey with past surveys.

I will let you know at a later date what our plans will be with regard to additional fish surveys.

Edward E. Stewart
