SAF OSHA-ASBESTOS EXPOSURE
PROTECTION FOR BUILDING
TRADES PERSONNEL

MEMORANDUM

Memo to File

Following a three-way conversation between F. J. Beall, D. J. Slack and the writer on March 4, 1982, D. J. Slack called March 5, 1982 to discuss acceptable precautions for the newly consolidated Building Trades Department, since we will now have former carpenters and painters doing insulation work.

It was determined that the following procedure would protect the individuals and comply with current OSHA regulations:

1. Base line medical condition of each employee will be established in order to monitor potential exposure to asbestos.
2. Protective disposable clothing will be issued within the plant at either the shop, zone office, or work site whenever asbestos material will be handled.
3. The disposable clothing will be disposed of in accordance with current plant rules at the appropriate location.
4. Following removal of the protective clothing, the employees will wear their normal work clothes from the plant to the Main Locker Room where facilities are provided for all hourly employees to shower and change into street clothes.

All the Building Trades Department employees will be provided two lockers to separate their work clothes from their street clothes, if they don't already have two lockers, even though our protective procedures probably negate this need as an OSHA requirement.

6. It is not necessary to relocate the former carpenters and painters to another area of the Main Locker Room. Any request to change lockers will be handled by normal procedures.
