

TABLE 5 - Part I
Study of the Asbestos Cohort

Year	No. Alive At Beginning of Year	Cause of Death				Man- Years of Risk
		Proved Primary Ca. of Lung	Suspected Primary Ca. of Lung	Other Causes	Unknown	
1950	2273	0	1	6	0	2270
1951	2267	1	0	5	0	2264
1952	2261	0	0	9	0	2256.5
1953	2252	0	0	9	0	2247.5
1954	2243	0	0	12	0	2237
1955	2231	2	0	5	0	2227.5
Totals		3	0	46	0	13502.5

"Proved" cancer of lung death rate per 100,000 man-years of risk =

$$22.2 \left(\frac{3}{13502.5} \right)$$

TABLE 5 - Part II
Study of the Thetford Mines Cohort

Year	No. Alive At Beginning of Year	Cause of Death				Man- Years of Risk
		Proved Primary Ca. of Lung	Suspected Primary Ca. of Lung	Other Causes	Unknown	
1950	3685	1	2	6	1	3680
1951	3675	1	0	12	1	3668
1952	3661	0	0	28	0	3647
1953	3633	2	1	25	0	3619
1954	3605	1	0	21	4	3592
1955	3579	1	0	31	0	3563
Totals		6	3	123	6	21769

"Proved" cancer of lung death rate per 100,000 man-years of risk =

$$27.6 \left(\frac{6}{21769} \right)$$

"Suspected" plus proved cancer of lung death rate per 100,000 man-

$$\text{years of risk} = 41.3 \left(\frac{9}{21769} \right)$$
