

## APPENDIX A

### Chemical and Physical Properties of PCBs

#### Table of Contents

|                                                                      | <u>Page</u> |
|----------------------------------------------------------------------|-------------|
| I. Chemical and Physical Characteristics                             | 23          |
| II. Problems in Analytical Chemistry -<br>Comparison of Methods      | 27          |
| II.1 Separation                                                      | 27          |
| II.2 Quantitation                                                    | 29          |
| III. Contaminants, Impurities, or Other Chemical<br>Moieties in PCBs | 37          |

#### Tables

|                                                                                |    |
|--------------------------------------------------------------------------------|----|
| 1 - General Physical Properties of the Aroclor<br>Chlorinated Compounds        | 26 |
| 2 - Relative Retentions, Mass Spectrometric Data<br>on PCB Fractionated Sample | 37 |

#### Figures

|                                                                           |       |
|---------------------------------------------------------------------------|-------|
| 1-6. Chromatograms of various representative PCBs,<br>according to Armour | 31-36 |
|---------------------------------------------------------------------------|-------|
