The corporation's attitude in undertaking these investigations is expressed in the words of its president: "If there is any unknown or uncontrollable industrial hazard --" I apologize.

The president said, "If there is any unknown or uncontrollable industrial hazard in the manufacture or application of this material, we want no part of it."

Again, referring to Dr. Gardner's report. And I will skip over some of this.

Dr. Gardner wrote, investigation of over 20 different types of dusts is indicated, no reaction occurs in organs other than the lungs. It will not occur in the respiratory tract and that conversely dust like silica and asbestos that are known to produce fibrosis of the lungs also cause fibrosis in other tissues when injected in sufficient quantities.

This is our Owens-Illinois and Owens-Corning Exhibit Number 9.

THE COURT: Which is?

MR. SMITH: September 8, 1941.
