

Who knows more about brakes than Abex?

You can ask hundreds of our loyal customers that question. And we hope you do. People like Gordon Cantlay, Vice President of Maintenance for Western Gillette in Los Angeles. His rigs need the very best and most dependable brake linings in their day-to-day routes over the nation's most rugged mountain passes. To maintain the loyalty of companies like this, and the many others we are so glad to serve, we spend millions a year developing and testing even better friction materials in our huge Mahwah, New Jersey, facility. You see, we know we know more about brakes.

You'll find our know-how at work in the aircraft business, too. It's no easy task to stop the world's largest aircraft. Abex products have helped solve that problem. They are in daily service on the world's most popular jet aircraft. Our new carbon graphite discs are being tested on the world's best known supersonic transport. And right now, we're working with leading foreign and domestic car manufacturers in developing future generation automobile brakes.

When you devote as much time and people-skills to research, development, and testing, there's bound to be results. We're proud of the way our friction materials meet or exceed the many demanding federal and state performance standards. And we want you to share in our knowledge. If you're a heavy duty fleet distributor or a fleet maintenance supervisor, anywhere in the United States, you'll welcome a presentation we've put together called the DOT BRAKE SYSTEMS SEMINAR. Give us a call at (313) 643-4400. And get a thorough briefing on what's happening today in the world of friction materials... from the people who know!
