

The SAUCER TEST

shows you how to
SAVE MONEY ON METAL PAINTING JOBS

• Dutch Boy Red-Lead is a fine, highly oxidized red-lead supplied in two forms—paste and liquid. The paste comes in natural orange-red, is readily mixed to brushing consistency and can be tinted to darker colors. Dutch Boy Liquid Red-Lead (ready for the brush) is available in the natural orange-red, two shades each of brown and green, and also in black.

Are you using the best paint to protect your metal structures against corrosion? How does the paint you are using stand up in comparison with other paints—such as pure red-lead?

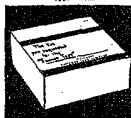

How can you determine the most durable metal-protecting paint without the expense of painting and repainting entire structures?

Let the "Saucer Test" give you the answer to these questions...and save you money on your painting. Quickly, accurately, at no cost, this ingenious test enables you to study the effects of rain, sun, fumes, salt air, smoke or any other corrosive agent on metal paints. With the "Saucer Test" you can stage a miniature reproduction of the conditions which constantly menace your metal property...and prove conclusively which paint protects your investment longest and saves you most money in the long run.

Judging by the experience of others, you will find that Dutch Boy Red-Lead is the

most durable and economical paint coating for your iron and steel. One railroad, which makes the "Saucer Test" the basis of all its metal paint purchases, reports that red-lead stands up against the reaction of locomotive cinders and water four times longer than other paints tested.

Make the "Saucer Test" at our expense. Learn how Dutch Boy Red-Lead saves you money. The coupon will bring you a testing kit, set of testing instructions and an invaluable metal painting manual...free.
