Don't give heating system breakdown a second thought.

Think Therminol® first.

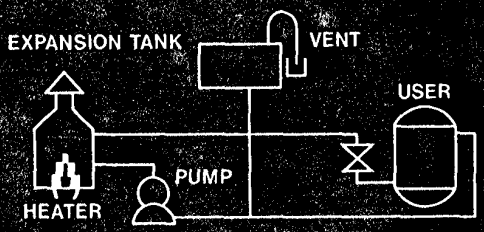

Breakdowns got you down? Forget them. With dependable Therminol® heat transfer fluids, you're on your way to the most trouble-free system you can get.

A broad operating temperature range of -40°F to over 700°F lets you pick the exact fluid for your particular need. Even heat and cool with the same system.

And there's no high pressure to cause problems. All fluids operate in liquid phase at atmospheric pressure—saving you the cost of expensive safety and monitoring devices.

New or existing plants can rely on a Therminol System. Conversion of any liquid phase system can often be accomplished without work stoppage.

Specify Therminol heat transfer systems from your equipment dealer. Or write today for our new illustrated brochure, "Therminol: Applications Unlimited." Monsanto, Dept. G5ED, 800 N. Lindbergh Blvd., St. Louis, Mo. 63166.

Therminol: The sure thing
