R. Paladino:
AT&T-C C06 LA-127

Attached is a copy of the "Recommended Specifications for Asbestos Removal" (Appendix E,) from the "Asbestos Policy Committee's Report to the Governor--March 1985."

I am still trying to locate the specific regulations for asbestos removal in New Jersey, and will send you a copy when I do so. However, I believe the regulations will essentially be a restatement of the attached specifications.

In response to some of your specific questions:

1. p.E-6: A large asbestos hazard abatement job involves the removal of more than 160 square feet of material.

2. p. E-8: Must submit an application at least 10 days prior to the start of any asbestos work project. (p. E-9)

3. p. E-16: All asbestos waste must be double bagged in 6 mil plastic bags with visible labels.

Please call if you have any additional questions.
