MON-2535

Old insulation in the past has been put in plastic bags, sealed, identified, and disposed of in the disposal dumpsters.

A meeting with Jim Edwards, Mundy management and I concluded that this material should be buried on site.

It would be better for us if we could continue to use the dumpsters. Would you please rule on any environmental or legal aspects continuing to send insulation of the plant via the dumpster? Some or all of the insulation could contain asbestos.
