N O T I C E

The S&H Green Stamp incentive program to reduce blood lead levels will be discontinued effective January 1, 1980.

In its place the following will be incorporated to become effective January 1, 1980.

Any employee who is required to wear a respirator thru the entire work shift will be given a \$50.00 gift certificate when the results of the latest blood lead sampling show his level to be below 0.050.

This applies to the routine blood sampling which means an employee can earn up to six awards per year.

I am sending you a copy of the report I sent to the research coordinator for the Lead Industries Association. As we discussed, I will be sending them quarterly reports and will need all the new test results as well as any changes made in each employee's age, department, and/or medical removal status. If I have not received your information by the second week of the new quarter, I will give you a reminder call.

Thank you very much for your cooperation in this project. Kathy was a great help too. We will keep you informed.

If you have any questions, please don't hesitate to call me at (201) 831-2413.

Sincerely,

Judy Nelson

RE: Blood Lead Comparison Program

Enclosed are the Blood Lead Statistics for the 1st Quarter 1983. Also, in the process of compiling the data for the 2nd and 3rd Quarters, we discovered that the data for the 1st Quarter was incorrect. The blood samples received for the 1st Quarter were analyzed for a six month summerization period. The data for the 1st Quarter has now been corrected and is being included in the 2nd and 3rd Quarters.

Please send data for Third Quarter 1982 (July, August, September) to Peter Gartside by January 30, 1983. Thank you.

Sincerely,

Rosalind Volpe/cm
